

# Axioms

npm i axios

use `fetch` (or `import axios`) to make requests.

## requests

get :

```
axios.get(curl).then(data => { ... })
```

data.data  $\mapsto$   $\langle P_N \rangle$   $\langle P'_N \rangle$

```
post: axios post (url, body).then (data => { ... })
```

## کے دلائیں

index.js 파일은 다음과 같은 내용입니다.

• • •

```
import axios from 'axios'
```

• • •

axios.default.baseURL = 'http://localhost:8191/api'

axios.default.baseURL = 'http://localhost:8191/api'

## interceptors

```
axios.interceptors.request.use((config) =>
{
  const token =
    localStorage.getItem("tokenKey");
  if (token) {
    config.headers["token"] = token; ← taken → the token from localStorage
    config.headers["Content-Type"] =
      "application/json";
    return config;
  };
})
```
